Scheme0 Core Evaluation Semantics

October 18, 2021

The Scheme0 core evaluation semantics is given as a three-place relation between a variable environment ρ, expression e, and value v, written $\rho \vdash e \Downarrow v$, pronounced "under ρ, e evaluates to v". Formally, the evaluation semantics is taken to be the smallest relation closed under the following rules:

Variables and values

$$\text{E-VAL}\ \frac{}{\rho \vdash v \Downarrow v} \qquad \text{E-VAR}\ \frac{\rho(x) = v}{\rho \vdash x \Downarrow v}$$

Unary operators

$$\text{E-NOT}\ \frac{\rho \vdash e \Downarrow b}{\rho \vdash (\text{not } e) \Downarrow \neg b}$$

Binary operators

$$\text{E-BINOP}\ \frac{\rho \vdash e_1 \Downarrow n_1 \qquad \rho \vdash e_2 \Downarrow n_2 \qquad n_1\, b\, n_2 = v \qquad b \in \{+, *, -, /, =, <\}}{\rho \vdash (b\, e_1\, e_2) \Downarrow v}$$

Let expressions

$$\text{E-LET}\ \frac{\rho \vdash e_1 \Downarrow v_1 \qquad \rho[x \mapsto v_1] \vdash e_2 \Downarrow v_2}{\rho \vdash (\text{let } x\, e1\, e_2) \Downarrow v_2}$$

Conditionals

$$\text{E-IF-TRUE}\ \frac{\rho \vdash e_{cond} \Downarrow \text{true} \qquad \rho \vdash e_1 \Downarrow v_1}{\rho \vdash (\text{if } e_{cond}\, e_1\, e_2) \Downarrow v_1} \qquad \text{E-IF-FALSE}\ \frac{\rho \vdash e_{cond} \Downarrow \text{false} \qquad \rho \vdash e_2 \Downarrow v_2}{\rho \vdash (\text{if } e_{cond}\, e_1\, e_2) \Downarrow v_2}$$
